#### Config file location

```
--[no-]global      use global config file
--[no-]system      use system config file
--[no-]local        use repository config file
--[no-]worktree     use per-worktree config file
-f, --[no-]file <file>
                    use given config file
--[no-]blob <blob-id> read config from given blob object
```

#### Operation

```
--get              get value: name [<value-pattern>]
--get-all         get all values: key [<value-pattern>]
--get-regexp       get values for regexp: name-regex [<value-pattern>]
--get-urlmatch     get value specific for the URL: section[.var] URL
--replace-all     replace all matching variables: name value [<value-pattern>]
--add              add a new variable: name value
--unset            remove a variable: name [<value-pattern>]
--unset-all       remove all matches: name [<value-pattern>]
```
